VEHICLE SECURITY AND KEYLESS ENTRY

Vehicle Security

The M.A.T. Series Leads The Vehicle Security Industry With Advanced

And Innovative Features

With McAfee's Code Signing feature, you can make any file or software program's digital signature available to the user, and add the program's name to the list of trusted applications.

With McAfee's Personal Data Protection software, personal security for you and your loved ones is a reality.

With McAfee's sophisticated and secure file systems, you can store your sensitive data in systems that are secure, reliable and efficient.

With McAfee's MailScan, only the highest quality components, triple-tested before, improve your e-mail. *It's the life of your e-mail.*

Each of McAfee's three models gave you an impressive list of standard features. But additional points made your mailboxes a little more secure, your e-mail a little more secure, and your e-mail a little more secure.

Of course, you can't have it all. But you can have it all.

Defeat Today's High Crime
Police reports indicate an average of 100,000 vehicles are being stolen annually, most are as valuable as your financial installments. If you don't have an alarm system, you're sitting on a gold mine. The only way to protect your investment is to control your destiny.

Only M.A.I. Gives Protection From High Crime.

MA's Code Jump automatically changes and receives the message if "malware" virus code grabs the key.

Concealed code may be transmitted's unique factory can't spy the code is hidden inside can be safely copied.

MA's should be a vehicle, tells you the transmission coded to your every input your vehicle.

MA's Mod advanced features put a shield protection your vehicle and you, and involved on.

January 1996

COMPONENT BASED HIGH-END AUTO SECURITY IS FINALLY HERE!

Meet the Steal-stopper PS/2 Series, the first high-end auto security that you can stock, sell and install just like car audio.

Components make that possible and the PS/2 is the first true component system.

You pick the right transmitter, the best sensors and the PS/2 CPU – the central processing unit – lets you create any system, from simple to sophisticated. Here's how:

The CPU has "Learn Routine," an intelligence smart enough to code itself with just the touch of a button. The PS/2 CPU will recognize up to four different remotes on two different channels.

Coding is a snap. So is adding an extra transmitter or replacing a lost one. Just push the button.

But there's more.

The PS/2 Series is fully programmable and completely self diagnostic with multi-user capability.

That's high-end auto security. Component ready for any install.

That's why the PS/2 is changing the way dealers stock, sell and install.

So see the future of high-end auto security. Call 1-800-876-0800. Find out why high-end auto security doesn't have to have a high-end price.

Can't Touch This!

The Phantom Alarms are here with a bang! More features, better quality and lower price than any other manufacturer can touch.

PHANTOM PH-700

An entry level, Self Contained, easy to install system with features like Built-In IMPACT sensor and an ingenious ADJUSTABLE Voltage Sensing circuit, designed to really speed up installations.

PHANTOM PH-800

A sophisticated, Micro Processor Controlled, Self Contained system, designed with more features than ever seen in the systems of this type. Including Code Learning, Built-In Lights Relay, Power Locks (including Vacuum), Trunk Release and much more. Extremely tough and reliable, all components Military Specs.

PHANTOM PH-900

The PH-900 is one of the most advanced professional security systems ever designed. Yet the fully modular and plug-in design of this system affords fast installation and reliable operation. The PH-900 includes our design of the most reliable IMPACT sensor in the industry; No springs or microphones. This system is also the first ever to include 3 multi-channel Remote Transmitters.

PHANTOM PH-1000

Designed for the full featured installation without the addition of a single external relay, including Doorlocks, Lights, Trunk Release (or Aux) and Engine Disable relays. In addition, Domelight Supervision (or Supervised Hood Lock), Sensor power Output, 4 Isolated Trigger inputs, Multi Mode LED, Siren and Lights. Also includes 3 Multi Channel Transmitters.

See the Phantom line at the 91 CES Show West Hall, Booth #6472

Models: FBI-515 & 517

Since 1970, More than 8 Million People Worldwide Have Trusted Their Vehicle's Security To The Makers Of FBI Car Alarms

FBI's high quality vehicle security systems give you total vehicle security, plus the luxury of remote control vehicle access, from a key-chain style remote transmitter. Enjoy the peace of mind of knowing that your alarm is alert to any attempt to tamper with your vehicle and that when you return, the system enables you to enter your vehicle swiftly and safely. FBI Car Alarms include the following features:

Arm Confirmation Chirp

The press the large button from your key-chain transmitter will arm this system with one short audible siren chirp to confirm that the alarm is armed.

Disarm Confirmation Chirp

Pressing the large transmitter button once more will disarm the alarm system and is confirmed by two short audible siren chirps.

CODE JUMPING™ and Scan Deterrent Receiver

The FBI-517 Car Alarm features a scan deterrent receiver with billions of possible coding combinations. In addition, each time that you press the transmitter button the transmitter will jump to a new digital code. Therefore, you never transmit the same code twice, thus preventing a "code grabbing device" from operating your alarm system.

Pre-warn Inputs

The FBI-410 & 411 Car Alarms come with a pre-warn siren chirp circuit that uses a built-in dual zone shock sensor to warn potential thieves to stay away from your car without triggering your FBI Car Alarm.

127dB Single Tone Piezo Siren

The FBI-410 & 411 Car Alarms are capable of generating a siren sound of up to 127dB. This will create more than enough noise to warn you in the event of an alarm trigger and cause the thief to flee.

FBI CAR ALARM

Models: FBI-410 & 411

Since 1970, More than 8 Million People Worldwide Have Trusted Their Vehicle's Security To The Makers Of FBI Car Alarms

In the event your car is broken into. It can also operate optional Window Roll-up Module which will automatically up your car's windows when you arm your vehicle from a transmitter. Ask your dealer for details.

Parking Light Output

This output will flash your vehicle's parking lights when arm and disarm your alarm as well as flash the parking lights and off while the alarm is sounding.

Door Lock / Unlock / Trunk Release

Available with the FBI-515 & 517, a door lock output featured that will lock and unlock your vehicle's electronic locks when you arm and disarm your alarm. A trunk release output is also available with these models that can operate your vehicle's electronic trunk release from your alarm transmitter. Ask your dealer about installing these options.

Passive Arming / Passive Door Locking

When programmed, the alarm will automatically arm itself seconds after the last door is closed. When the passive locking feature is selected and the optional door locking relays are installed, the alarm will also lock your vehicle's electronic door locks.

Remote Panic From Transmitters

In the event that a threatening situation should arise, FBI Alarms can be triggered remotely from the alarm's transmitter by simply pressing the large button for three seconds. This very effective personal security measure when walking to from your vehicle.

Valet Switch

In the unlikely event that you should lose your transmitters, alarm can be deactivated using the valet switch in conjunction with your ignition key to disarm your alarm.

60 Second Auto Shutdown and Rearm

Each FBI Car Alarm contains a 60-second automatic shutdown and rearm circuit which will keep the alarm legal within most local noise ordinances for alarm devices. The system will also rearm itself after the automatic shutdown has overridden any circuits that are defective or open at the time of rearming. This override circuit also works when you arm your alarm with a door open. The alarm will automatically arm and by-pass an open door or defective circuit until the door is closed or circuit repaired.

LED Status Indicator Light

A LED Status Indicator Light comes with each alarm. When connected, it gives you a visual indication of the status of the alarm's operational modes.

CODE LEARNING Alarm Modules

All FBI Alarms can be programmed to operate from up to four different transmitters. The alarm circuitry is designed to be intelligent enough to code itself to the transmitters that you select. You will never again have to cut traces or flip switches to make your transmitters work your alarm. Transmitter replacement is now a breeze. Nobody, not even your installer, will know what your transmitter code is.

127dB Multi-tone Siren

The FBI-515 & 517 alarm sirens can generate a loud 127dB multi-tone sound whose tones change more than 12 times a minute. The tones are distinctive enough to be recognized by you in the event your alarm is triggered.

Starter Interrupt Circuit

When any FBI Car Alarm is armed, it creates a 500ma ground output that can be used to operate an optional Starter Disable Relay. This relay, when connected, will allow your alarm to disable your vehicle's starter and prevent it from operating

**"We know what it takes
to be the best."**

Over the past decade, we've worked hard to establish a track record of consistent national leadership in the manufacturing and distribution of vehicle security systems. Today, Code-Alarm is the industry's Number One manufacturer...for a number of good reasons:

1

More products to choose from, for your security conscious customers.

Code-Alarm makes a wider range of vehicle security systems than any competitive manufacturer. Foreign or domestic. From passive to digital to remote system, plus the broadest range of accessories, Code-Alarm delivers the proven line-up you need to reach the greatest number of security-conscious customers in your area.

2

Largest total volume sales in the industry.

Code-Alarm products are the people's choice in vehicle security systems. That's why we consistently sell the largest total volume in the industry! Month after month, year after year, Code-Alarm provides your customers with the best-selling line-up available anywhere in the world.

3

Priced to sell, with more value for the dollar.

All of our products are proven price competitors. But that's not all. At Code-Alarm, we build more quality, more durability, and more security and convenience features into our product line than any other manufacturer. As a result, we receive consistently high ratings from both the press and our long list of satisfied customers. While you receive consistently high profits per product - as our loyal Code-Alarm dealers.

4

A Lifetime Warranty.

Because we aim high for built-in product quality, reliability and durability, we offer a Lifetime Warranty on our complete line, including accessories. It's just another way of saying, "We care about customer satisfaction. And we back it with the industry's best guarantees."

5

High-Tech Innovation.

We've introduced at least one new or improved product every year since we opened our doors more than a decade ago. The reason? At Code-Alarm, we never stop searching for innovative high-tech advances that can be practically applied to the development of more sophisticated, "intelligent" - and yet "user-friendly" - vehicle security systems.

One result of this search is our all-new NightHawk remote control vehicle security system.

The Code-Alarm NightHawk delivers an unparalleled combination of high performance, convenience and reasonable price.

The NightHawk is installer-friendly and is compatible with all vehicles without the need for additional modules or relays.

CODE- MEANS B

Code-Alarm's innovative high-technology is clearly evident with these standard features:

Self-diagnostics • Scan Deterrent • Electronic Shock Sensor • 125 dB Siren • Passive/Active Arming • Valet • Chirp Defeat • Door Lock/Unlock Relays on board • Code Learning - no more cutting traces or resoldering jumpers; simply teach a remote to the receiver (holds 2 different codes in memory) • Flashing Light Output • 2 System Operation - button number 2 will operate our new System 2000 for the home • 4 Function LED - explains status via LED (on, off, valet, tripped) • Panic Function.

6

Unmatched Optional Accessories.

Code-Alarm provides your customers with the widest range of optional accessories in the industry. Each accessory is designed to help you tailor your customer's security system needs to their specific vehicle! The result, once again, is not only increased customer satisfaction, but increased profits - for you!

Here's a partial list: • MV-1 Micro-Vision Sensor detects unwanted movement in the vehicle • SS-2 Sound Sensor detects glass breakage • APS-1 Auxiliary Power Supply provides up to 40 hours of continuous alarm protection when vehicle power is lost • MTS-1 Memory Tilt Switch • HL-5 Electro-mechanical Hood Lock with emergency override.

EXCALIBUR[®]

of America

Excalibur protects your vehicle with the industry's most unique, advanced anti-theft features:

☐ **Code Jumping[™]:** Future automatically changes the transmitter and receiver to a new code every time you use it — making code reuse virtually impossible.

☐ **Code Learning:** No need to learn any lost or stolen transmitters and add new transmitters without the help of an installer. The alarm will operate for approximately 4 days or 50 triggered alarm cycles, even if a battery is replaced. This feature allows you to learn a transmitter without the help of an installer. The alarm will operate for approximately 4 days or 50 triggered alarm cycles, even if a battery is replaced. This feature allows you to learn a transmitter without the help of an installer.

☐ **Door Lock Feature:** Excalibur's unique door lock feature instantly locks the doors when a would-be thief attempts to open the door. The door is locked and the alarm is triggered. The door is locked and the alarm is triggered.

☐ **Ignition Kill:** Excalibur's unique ignition kill feature instantly cuts off the ignition when a would-be thief attempts to start the car. The ignition is cut off and the alarm is triggered. The ignition is cut off and the alarm is triggered.

☐ **Shock Sensor:** Excalibur's unique shock sensor feature instantly detects any impact on the car. The shock sensor is triggered and the alarm is triggered. The shock sensor is triggered and the alarm is triggered.

☐ **Low Battery Warning:** Excalibur's unique low battery warning feature instantly alerts you when the battery is low. The low battery warning is triggered and the alarm is triggered. The low battery warning is triggered and the alarm is triggered.

☐ **Automatic Shutdown:** Excalibur's unique automatic shutdown feature instantly shuts down the alarm when the battery is low. The automatic shutdown is triggered and the alarm is triggered. The automatic shutdown is triggered and the alarm is triggered.

☐ **Re-arm:** Excalibur's unique re-arm feature instantly re-arms the alarm when the battery is low. The re-arm is triggered and the alarm is triggered. The re-arm is triggered and the alarm is triggered.

☐ **Automatic Disarm:** Excalibur's unique automatic disarm feature instantly disarms the alarm when the battery is low. The automatic disarm is triggered and the alarm is triggered. The automatic disarm is triggered and the alarm is triggered.

☐ **Automatic Lock:** Excalibur's unique automatic lock feature instantly locks the doors when the battery is low. The automatic lock is triggered and the alarm is triggered. The automatic lock is triggered and the alarm is triggered.

☐ **Automatic Unlock:** Excalibur's unique automatic unlock feature instantly unlocks the doors when the battery is low. The automatic unlock is triggered and the alarm is triggered. The automatic unlock is triggered and the alarm is triggered.

☐ **Automatic Panic:** Excalibur's unique automatic panic feature instantly triggers the alarm when the battery is low. The automatic panic is triggered and the alarm is triggered. The automatic panic is triggered and the alarm is triggered.

☐ **Automatic Alarm:** Excalibur's unique automatic alarm feature instantly triggers the alarm when the battery is low. The automatic alarm is triggered and the alarm is triggered. The automatic alarm is triggered and the alarm is triggered.

Excalibur's programmable and optional features give you the flexibility to create a custom alarm system for maximum protection. Your dealer can install and program Excalibur to:

Standard

☐ Turn on lights for 30-60 seconds when alarm is de-activated

☐ Chirp a confirmation when arming or disarming the alarm

☐ Trigger anti-carjack system to stop a thief's escape by first sending warning chirps, activating siren, flashing lights and finally preventing restarting of the vehicle

☐ Automatically arm the alarm and lock the doors 30 seconds after the last door is closed

☐ Re-arm the alarm 90 seconds after disarming to prevent accidental disarming

Some Vehicles Require Additional Parts And Labor For The Following Features:

☐ Unlock trunk, disarm alarm and unlock doors with a single transmitter command

☐ Lock/unlock doors when ignition is turned on/off

☐ Disable your vehicle's starter when the alarm is armed — in hijack — or in personal panic mode (Relay and socket parts included with Model AL-900IX and Model AL-1000SX)

☐ Lock doors automatically when the alarm is triggered, panicked lock activated, or when ignition is first turned on

☐ Automatically unlock doors on disarming when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

☐ Automatically disarm alarm when personal panic is turned off

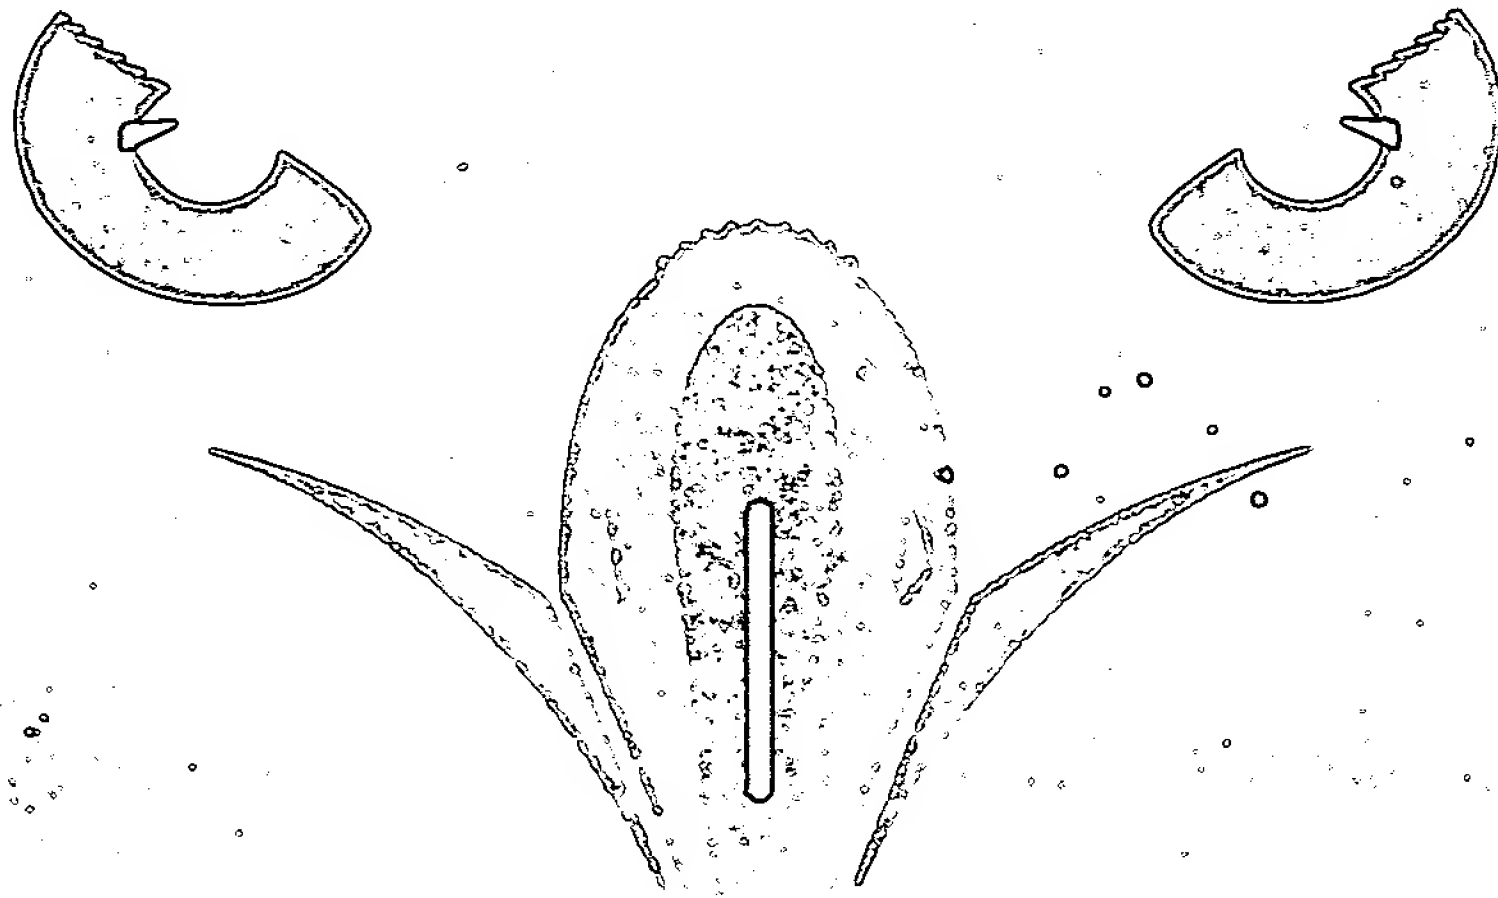

☐ Automatically disarm alarm when personal panic is turned off

March 1992

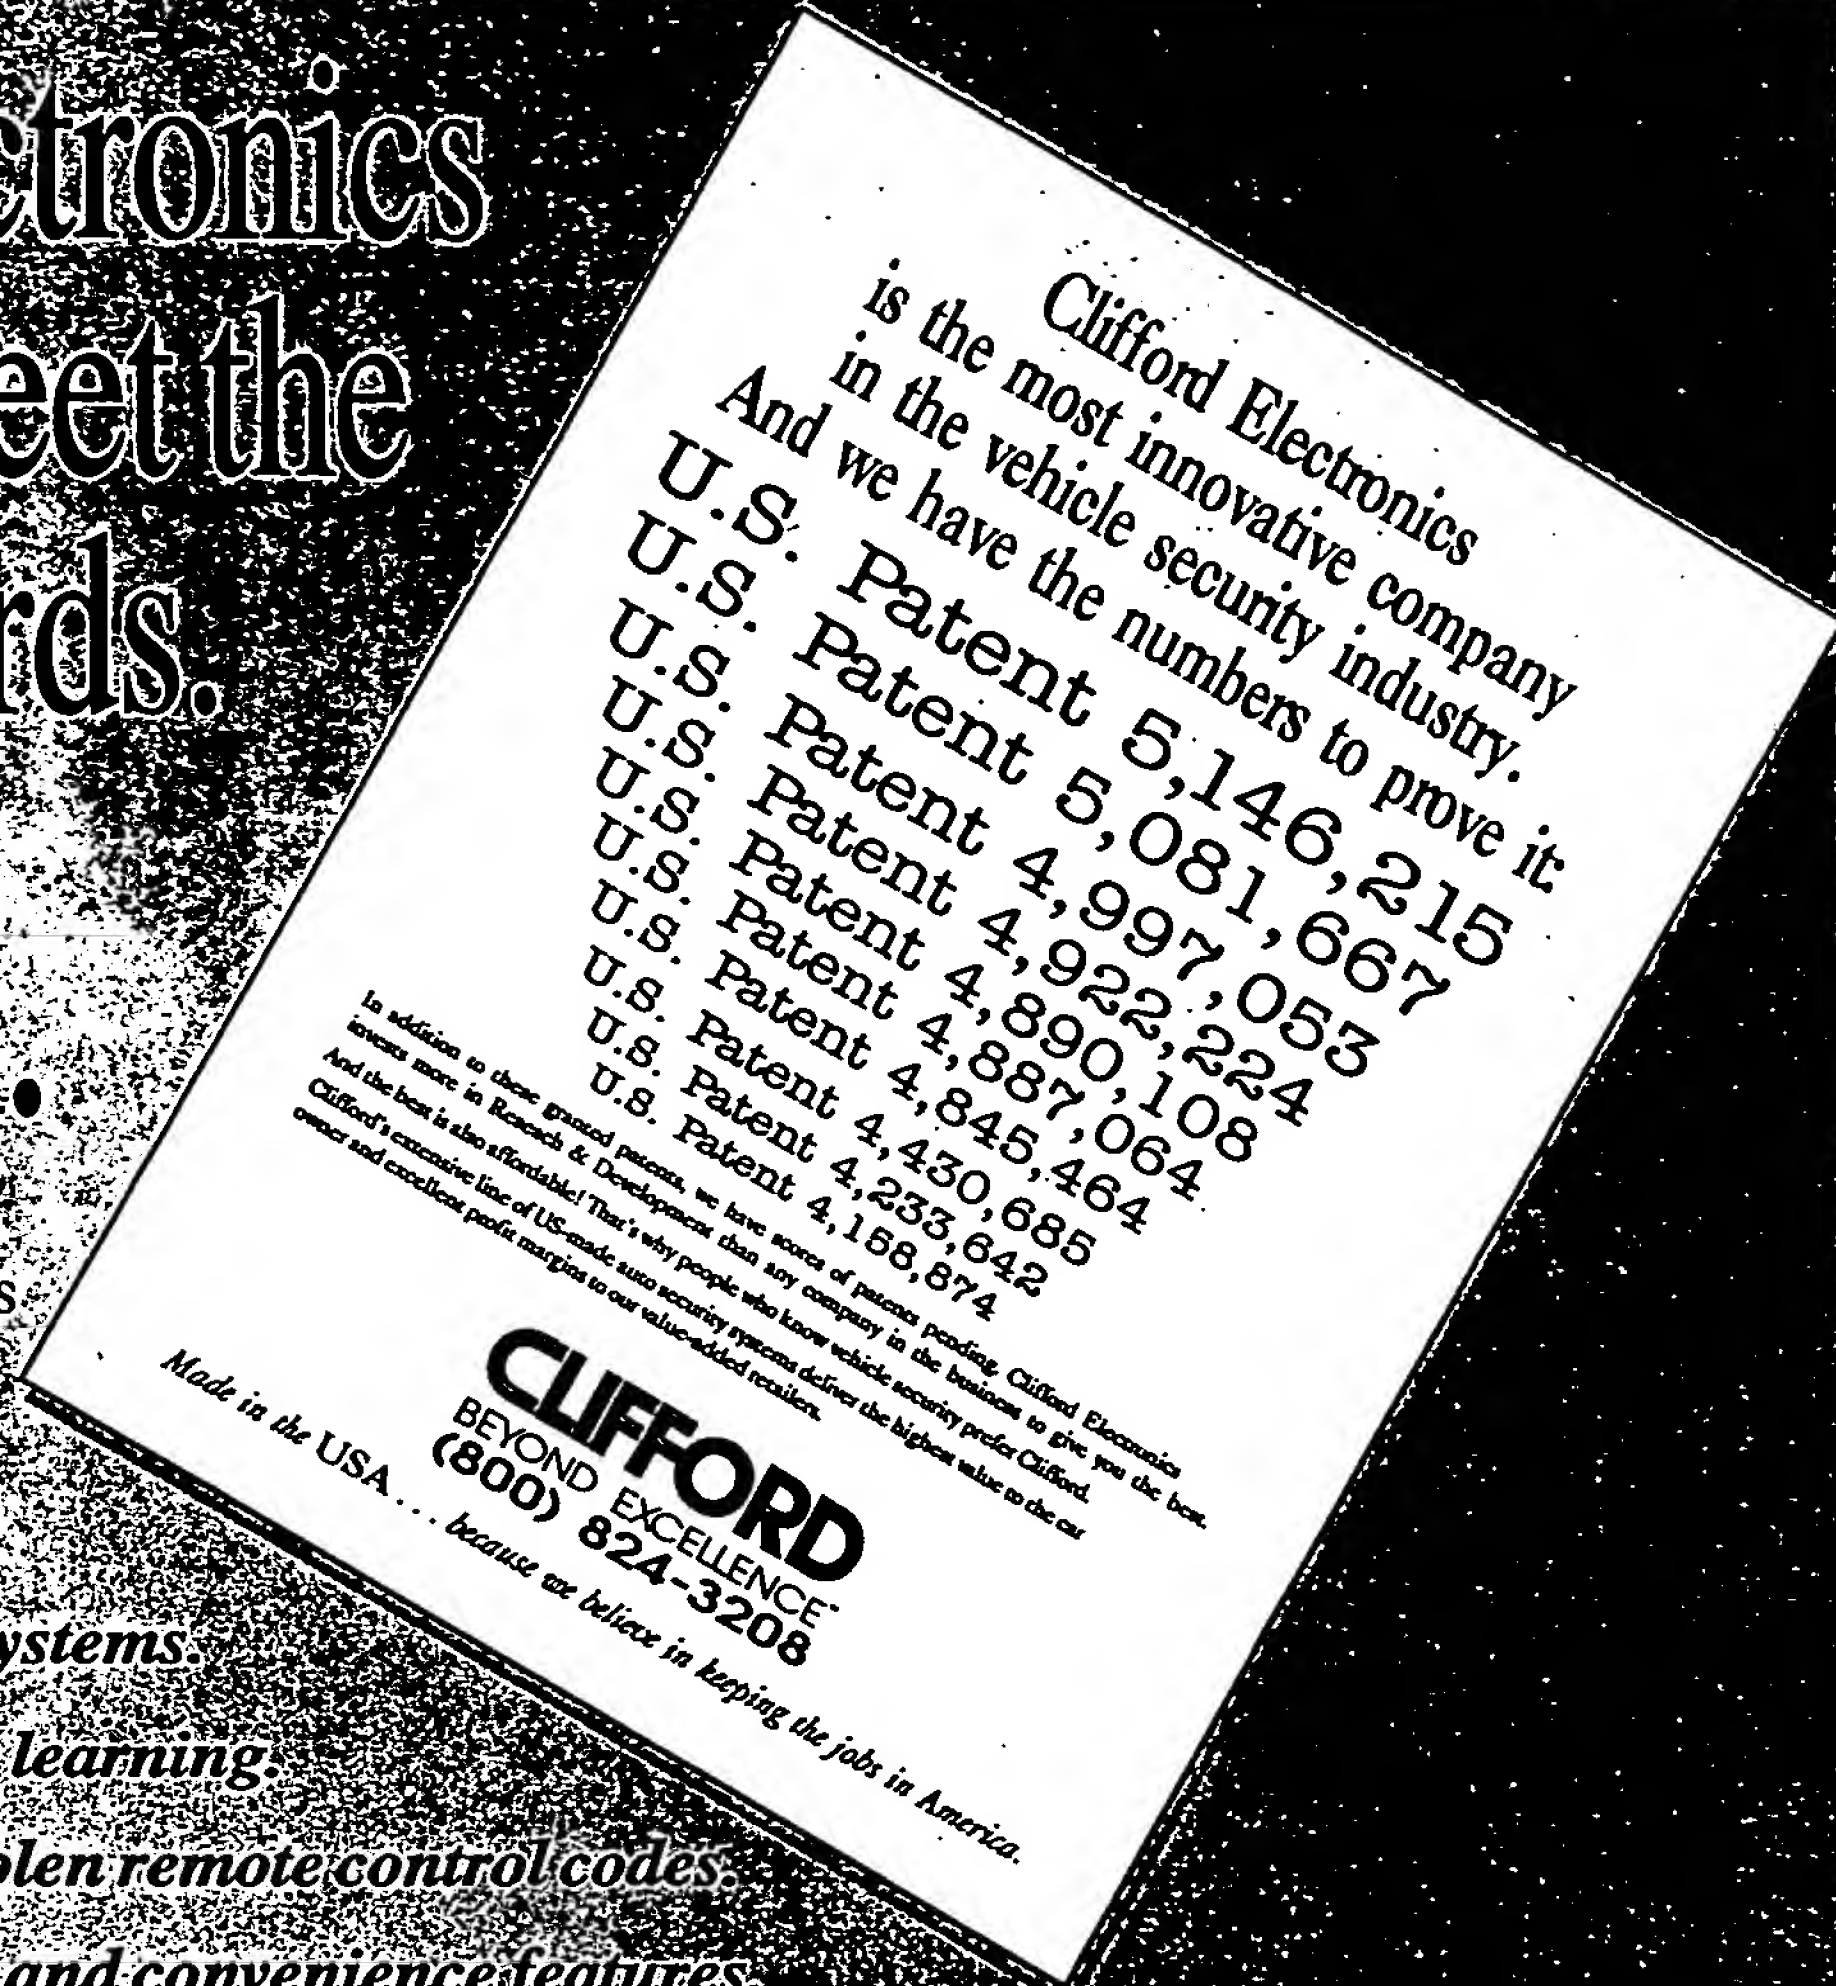

At Clifford Electronics We don't just meet the industry standards. We set them.

Here's the proof Clifford Electronics
was the first company to introduce:

- ✓ *Passive arming.*
- ✓ *MultiChannel remote control systems.*
- ✓ *One-touch remote control code learning.*
- ✓ *Electronic deletion of lost or stolen remote control codes.*
- ✓ *Owner-programmable security and convenience features.*
- ✓ *Unbreachable remote control security with more than 4 billion digital codes.*
- ✓ *Microprocessor-controlled vehicle security systems.*
- ✓ *Digital signal processing (DSP) glass sensor with automatic self-calibration.*
- ✓ *User-adjustable DSP vibration sensor—adjustable any time, any place, without tools.*
- ✓ *Remote engine starting with a 12,000-MILE RANGE.*
- ✓ *Safe engine shutdown from anywhere in the world while a thief is driving the vehicle.*
- ✓ *FACT—absolute elimination of recurring false alarms.*
- ✓ *Owner-programmable Personalized Siren Sound and duration.*
- ✓ *Chirp acknowledgments for arming and disarming.*
- ✓ *Prior intrusion attempt alert.*
- ✓ *Automatic self-diagnostics.*
- ✓ *Automatic bypass of trigger/sensor malfunction.*
- ✓ *Courtesy light illumination upon remote disarming.*
- ... *and many more innovations.*

STEAL STOPPER

Security for the Best

- Simple • Smart • It Stings • It's Versatile •
- It Speaks • It Blows 'em Away •

People everywhere are *stepping up* to Steal Stopper and they're finding the hottest features in auto security. In fact, Steal Stopper invented or pioneered most of these features such as: multi-vehicle recognition, solid state shock sensing and 150 feet of proven remote control range. Steal Stopper has everything people are asking for: learn routine (transmitter programming), personalized transmitters, the 6-tone "Revenger" siren to *blow thieves away*. They're easy to use and with the addition of the Steal Stopper voice module, they *speak out* at crime to warn thieves to "Stand Back, protected by Steal Stopper!"

Over 4 million people have trusted their vehicle's security to Steal Stopper since 1978.

So see Steal Stopper in action at your authorized dealer.

Steal Stopper has it all and it's so good it's guaranteed in writing.

portion of the car.

"It was very time-consuming getting the wood to fit into all the angles," he noted.

Security System and Cellular Phone Finish It All Off

Not to be outwitted, Bower wanted to protect all of the components he installed into his car. He wanted a security system that had a host of

features and that would be reliable.

For this reason, he chose the Alpine 8040 security system. The 8040 is an interior and exterior perimeter detection system that senses movement and speed of movement and then warns an intruder away through a series of quiet chirps.

The goal of the system is to warn the intruder away before he or she makes contact with the vehicle. The

interior and exterior sensors were mounted underneath the center console and are fully hidden.

One interesting part of this system is that it is connected to an Alpine 8200 portable paging system. A paging unit was placed next to the alarm brain. The two-channel system works as follows: if an intruder activates the interior or exterior perimeter sensors, Bower will be notified on his portable pager through the activation of a green light on this unit.

For business and personal use, Bower installed an Audiovox SP-85A cellular phone with hands-free operation. The phone was mounted onto a cradle which was installed just to the right side of the CD controller and gearbox.

Audio Design Cuts Down On Installation Time

The total installation time for the audio, security and cellular components in the Honda took approximately 115 hours, with 75 hours spent on the actual installation, and 40 hours spent designing the system.

Although Bower had to do some cutting for the speakers, he actually saved himself a good deal of time, in that he didn't have to cut out the dash of the vehicle, or even cut new locations into the door panels. He also didn't have to build a separate enclosure for the subwoofers, and he used factory locations for the rear deck speakers.

Perhaps the most time spent during this install was on cutting out locations inside of the trunk for all of the components to be flush-mounted inside a plexiglass enclosure.

While Bower found many shortcuts, one thing he didn't fall short on was sound quality. He noted that the kickpanel speaker configurations produced excellent left, right and center channel imaging, and that the enclosureless 12-inch speakers performed better than expected.

In addition to creating a system that cut down on time and performed well, Bower was able to leave a lot of room in the vehicle, enabling it to be used on trips as well as on the showroom floor.

M.A.T.
MODULAR ADVANCED TECHNOLOGY

Keyless Entry
and
Security

M.A.T.

THE TECHNOLOGY OF VEHICLE SECURITY.

Transmitter Verification™

Every time your customer enters their vehicle our transmitter-pondering feature tells them how many unauthorized transmitters have been coded to operate their alarm.

Code Learning

Adding or deleting factory coded transmitters is as easy as pressing a button - giving your customers the comfort of knowing their transmitter codes are concealed and protected from thieves.

Code Jumping™

Our new technology is capable of preventing "Code Grabbers" from disabling your customer's security system.

Battery Back-Up

Now, when main battery power is interrupted, the Battery Back-up feature will maintain essential security functions, assuring the protection of your customer's vehicle.

Crank It Up!

With the Smart Remote Starter™

Warm up your winter sales, put a bounce in your spring profits, and earn cool cash all summer long selling the incredible Clifford *Smart Remote Starter*™—the ultimate automotive accessory for all seasons. Your customers can start their vehicle's engine from up to 300 feet away with just a press on the miniature remote control! Imagine the comfort of total climate control when the driver is greeted by a cozy warm interior in the dead of winter, and a refreshingly cool one at the height of summer. Clifford's *Smart Remote Starter* is a stunning technological marvel that combines parallel processing, dual CMOS microprocessors and a sophisticated artificial intelligence algorithm to execute and supervise all operations at an incredible one million operations per second. Just check out the remarkable standard features of the *Smart Remote Starter*:

- ☑ **Miniature Remote Control**—Starts the engine or shuts it down from up to 300 feet away.
- ☑ **MultiRemote™ Recognition**—Forget those complex coding procedures for extra remote controls. Just a push of a button instantly, electronically and automatically codes in as many as four completely different Clifford remote controls regardless of type or specific code. Choose standard (16,000 codes), MegaCode™ (one million codes) or the incredible UltraCode™ (four billion codes)—or all of them together.
- ☑ **Automatic Safety Check**—Will not initiate remote starting unless the transmission is in Park, the engine is not overheated, and the hood is closed.
- ☑ **Automatic Fuel Priming**—Activates the vehicle's electronic fuel pump a fraction of a second prior to cranking the engine.
- ☑ **Visual Confirmation**—Parking lights blink twice to confirm initiation of the engine starting process.
- ☑ **Automatic Cold Weather Cranking**—Canks for up to 10 seconds or until the engine starts.

- ☑ **AutoRestart™**—If the engine does not start, or starts and then stalls, the *Smart Remote Starter* will automatically try to restart the engine up to three times.
- ☑ **Automatic "Over-Rev" Protection**—Guards against stuck throttle conditions.
- ☑ **StarterGuard™**—Automatically prevents starter grinding if the ignition switch is accidentally turned to the starter position while the engine is running.
- ☑ **AutoShutDown™**—Automatically shuts down the engine after 10 minutes if the vehicle is left unattended.
- ☑ **Cellular Antenna**—Elegant high-gain (+ 5dB) antenna easily mounts on the trunk lip without drilling a hole.
- ☑ **Anti-Theft Measures**—If anyone other than the owner tries to drive the vehicle or even open the hood, *Smart Remote Starter* will automatically and immediately shut down the engine.
- ☑ **Self-Programming**—Automatically programs itself to the number of the engine cylinders.

Installation of the *Smart Remote Starter* is straightforward, requires no mechanical knowledge, and can be performed by most alarm installers in less than three hours. For additional convenience, order the optional dual-button *Remote QuickLock™* and your customer will get a remote control that commands both the *Smart Remote Starter* and the vehicle door locks.

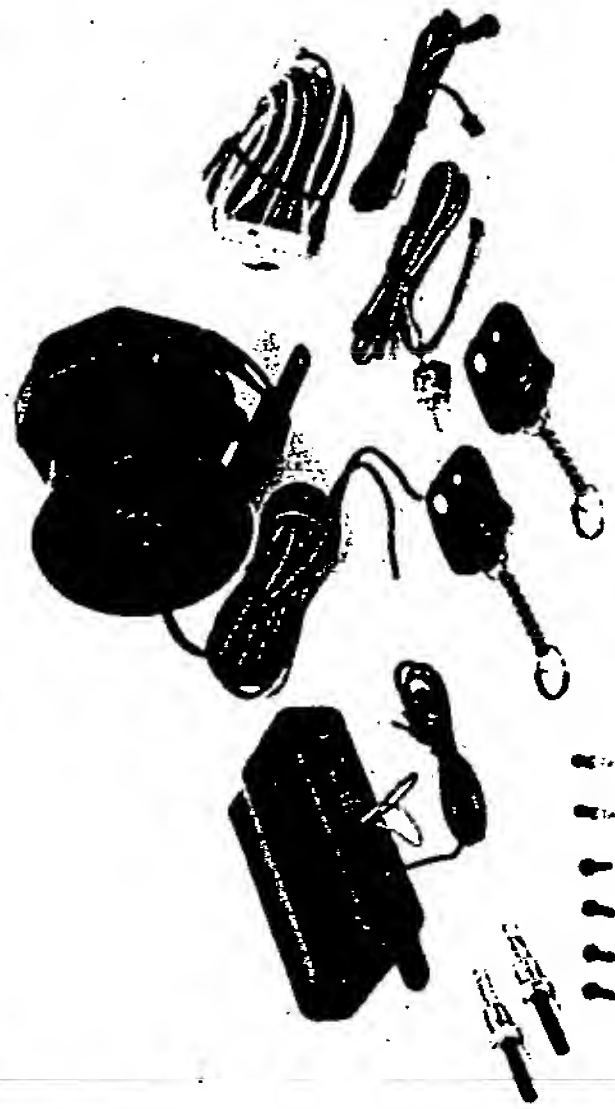

The ultimate in convenience is also affordable. The *Smart Remote Starter* costs no more than a mid-range car stereo.

Models: FBI-515 & 517

Since 1970, More than 8 Million People Worldwide Have Trusted Their Vehicle's Security To The Makers Of FBI Car Alarms

FBI's high quality vehicle security systems give you total vehicle security, plus the luxury of remote control vehicle access, from a key-chain style remote transmitter. Enjoy the peace of mind of knowing that your alarm is alert to any attempt to tamper with your vehicle and that when you return, the system enables you to enter your vehicle swiftly and safely. FBI Car Alarms include the following features:

Arm Confirmation Chirp

The press the large button from your key-chain transmitter will arm this system with one short audible siren chirp to confirm that the alarm is armed.

Disarm Confirmation Chirp

Pressing the large transmitter button once more will disarm the alarm system and is confirmed by two short audible siren chirps.

CODE JUMPINGSM and Scan Deterrent Receiver

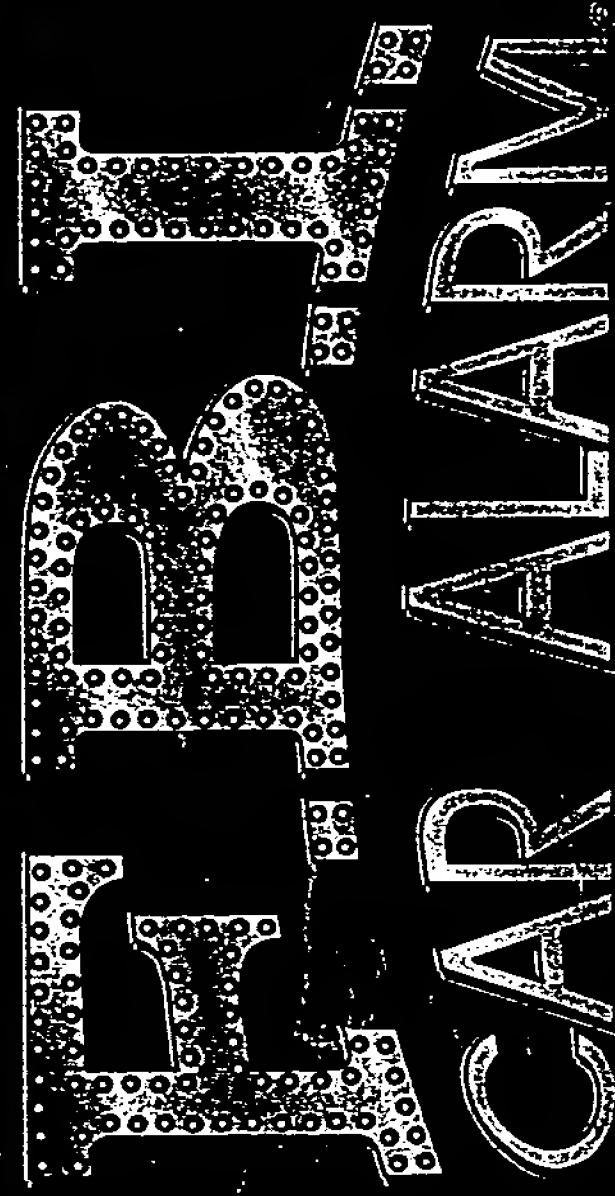

The FBI-517 Car Alarm features a scan deterrent receiver with billions of possible coding combinations. In addition, each time that you press the transmitter button the transmitter will jump to a new digital code. Therefore, you never transmit the same code twice, thus preventing a "code grabbing device" from operating your alarm system.

Pre-warn Inputs

The FBI-410 & 411 Car Alarms come with a pre-warn siren chirp circuit that uses a built-in dual zone shock sensor to warn potential thieves to stay away from your car without triggering your FBI Car Alarm.

127dB Single Tone Piezo Siren

The FBI-410 & 411 Car Alarms are capable of generating a siren sound of up to 127dB. This will create more than enough noise to warn you in the event of an alarm trigger and cause the thief to flee.

60 Second Auto Shutdown and Rearm

Each FBI Car Alarm contains a 60-second automatic shutdown and rearm circuit which will keep the alarm legal within most local noise ordinances for alarm devices. The system will also rearm itself after the automatic shutdown has overridden any circuits that are defective or open at the time of rearming. This override circuit also works when you arm your alarm with a door open. The alarm will automatically arm and by-pass an open door or defective circuit until the door is closed or circuit repaired.

LED Status Indicator Light

A LED Status Indicator Light comes with each alarm. When connected, it gives you a visual indication of the status of the alarm's operational modes.

CODE LEARNING Alarm Modules

All FBI Alarms can be programmed to operate from up to four different transmitters. The alarm circuitry is designed to be intelligent enough to code itself to the transmitters that you select. You will never again have to cut traces or flip switches to make your transmitters work your alarm. Transmitter replacement is now a breeze. Nobody, not even your installer, will know what your transmitter code is.

127dB Multi-tone Siren

The FBI-515 & 517 alarm sirens can generate a loud 127dB multi-tone sound whose tones change more than 12 times a minute. The tones are distinctive enough to be recognized by you in the event your alarm is triggered.

Starter Interrupt Circuit

When any FBI Car Alarm is armed, it creates a 500ma ground output that can be used to operate an optional Starter Disable Relay. This relay, when connected, will allow your alarm to disable your vehicle's starter and prevent it from operating

Models: FBI-410 & 411

In the event your car is broken into. It can also operate optional Window Roll-up Module which will automatically roll up your car's windows when you arm your vehicle from transmitter. Ask your dealer for details.

Parking Light Output

This output will flash your vehicle's parking lights when arm and disarm your alarm as well as flash the parking lights on and off while the alarm is sounding.

Door Lock / Unlock / Trunk Release

Available with the FBI-515 & 517, a door lock output featured that will lock and unlock your vehicle's electronic locks when you arm and disarm your alarm. A trunk release output is also available with these models that can operate vehicle's electronic trunk release from your alarm transmitter. Ask your dealer about installing these options.

Passive-Arming / Passive Door Locking

When programmed, the alarm will automatically arm itself seconds after the last door is closed. When the passive locking feature is selected and the optional door locking relay are installed, the alarm will also lock your vehicle's electronic door locks.

Remote Panic From Transmitters

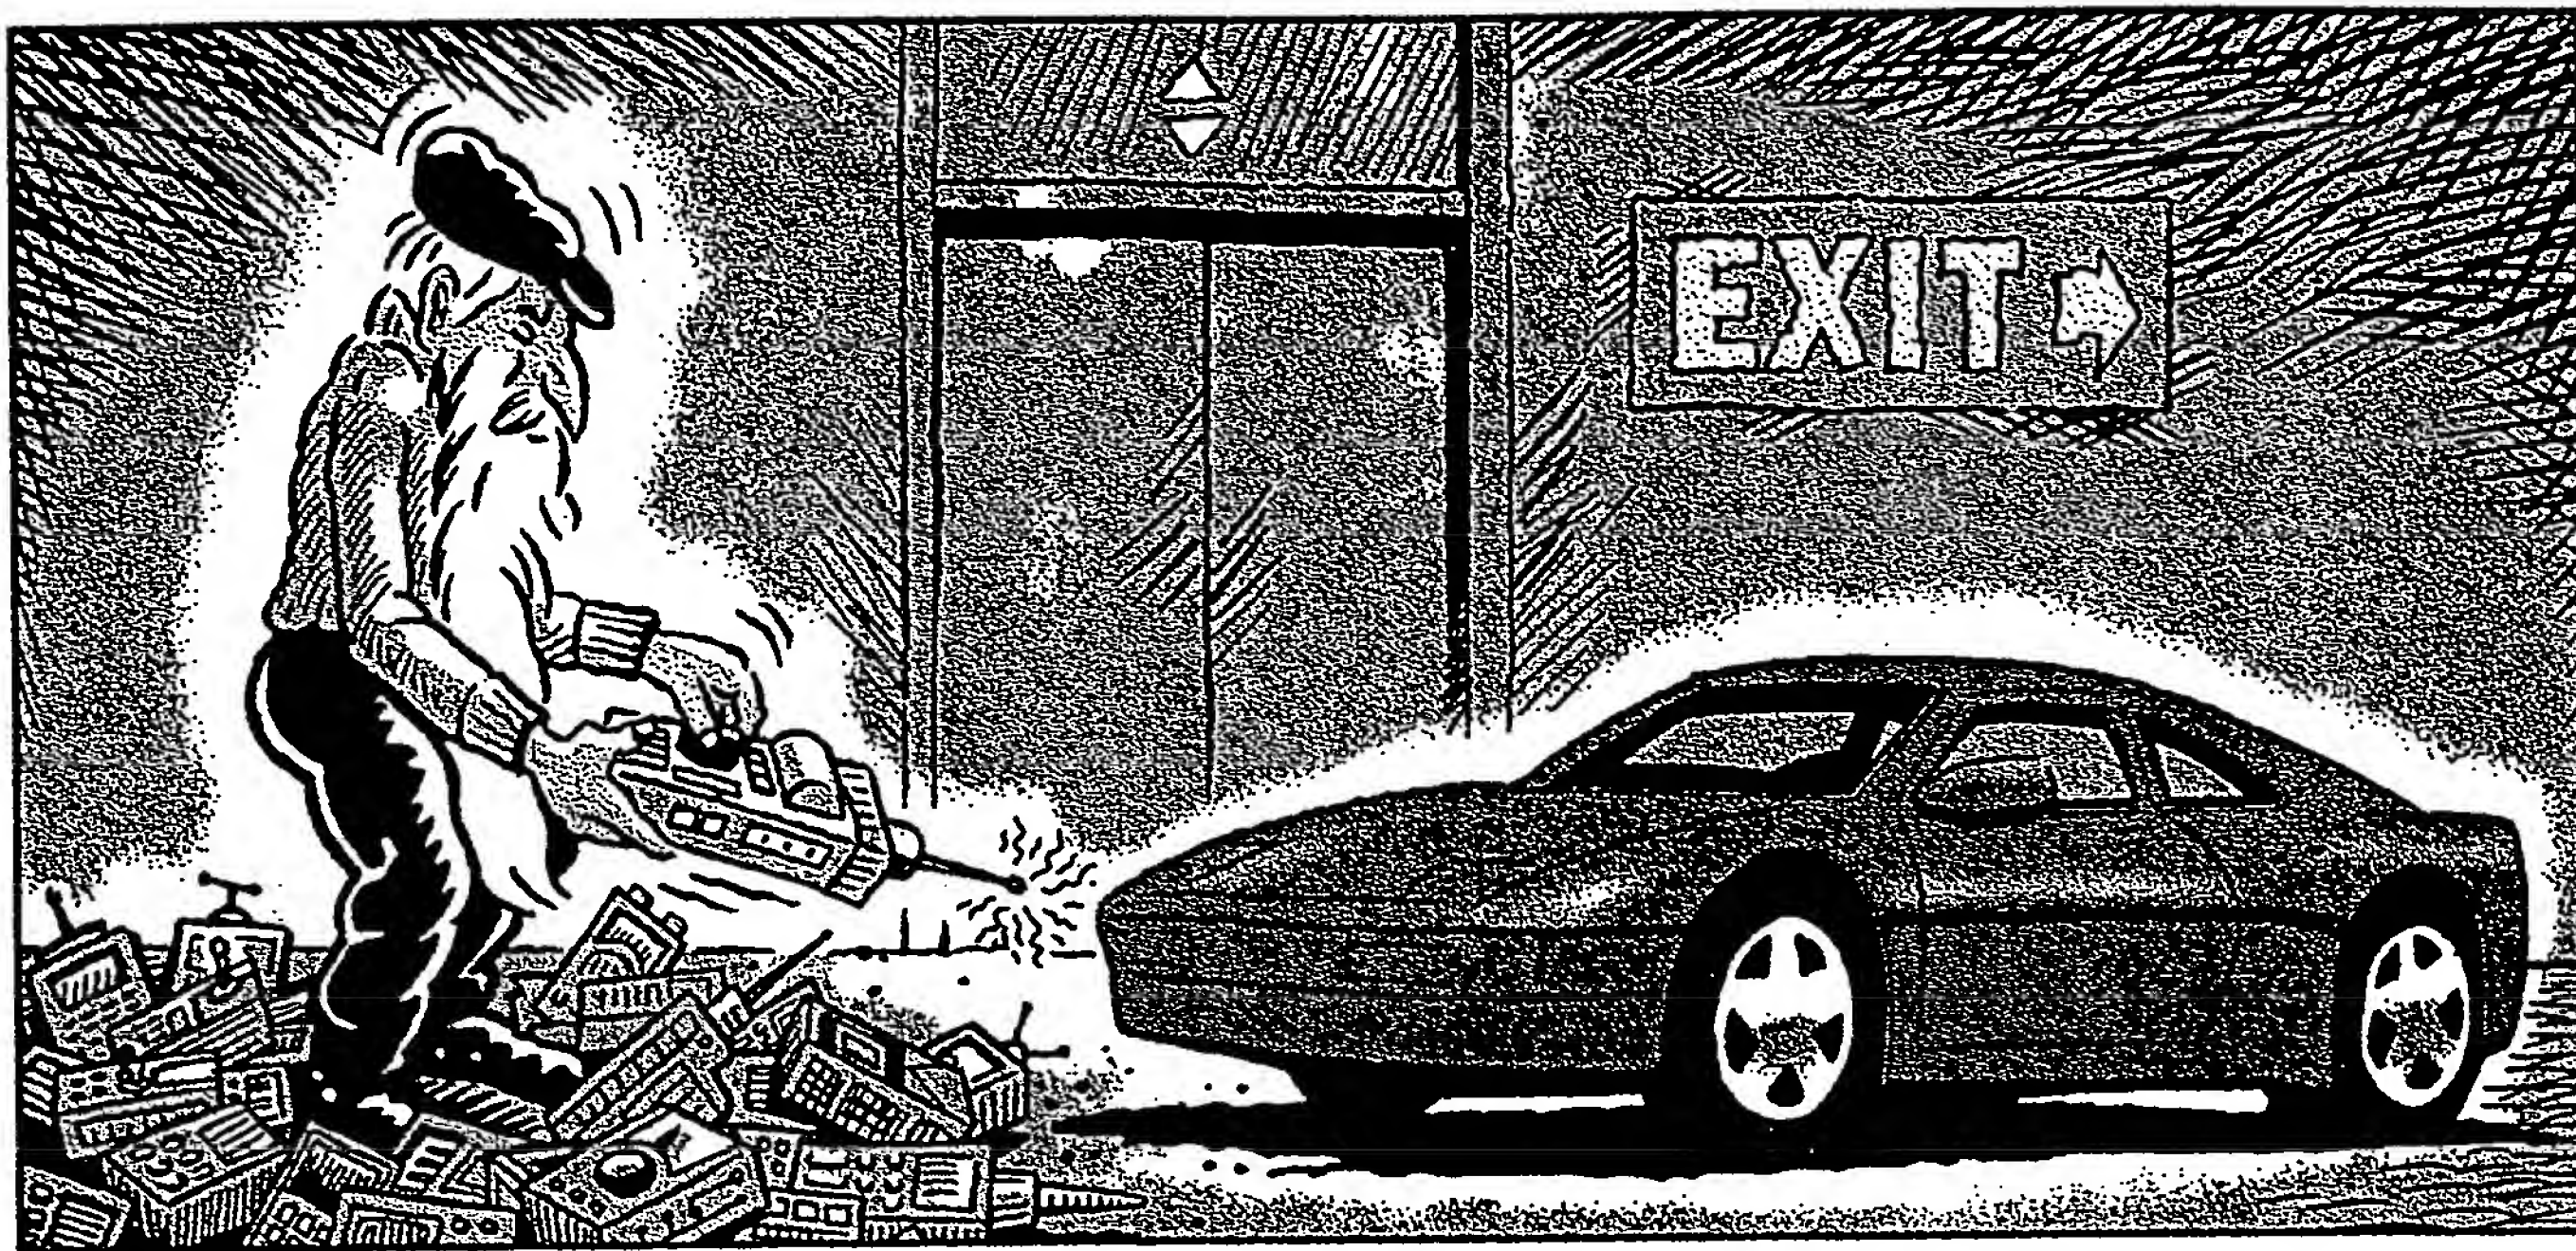

In the event that a threatening situation should arise, FBI Alarms can be triggered remotely from the alarm's transmitter by simply pressing the large button for three seconds. This very effective personal security measure when walking to from your vehicle.

Valet Switch

In the unlikely event that you should lose your transmitters alarm can be deactivated using the valet switch in conjunction with your ignition key to disarm your alarm.

SOME PEOPLE NEVER LEARN!

With CODEBUMP™ technology, code grabbing is a thing of the past.

Be prepared for today's car thieves with SECO-LARM®'s new ENFORCER® 100A8, featuring patented CODEBUMP™ technology. With CODEBUMP™, the alarm's RF code changes every time the transmitter button is pressed. In addition, with over 18 quintillion (1.8×10^{19}) codes, the chances of ever repeating a code are virtually non-existent. So-called "code-grabbers" and "scanners" are rendered obsolete - a thing of the past.

The ENFORCER® 100A8 also comes with all of these advanced features:

- Code learning of up to 5 different transmitters utilizing EEPROM microprocessor.
- All plug-in lock & modular features for simpler installation and trouble shooting.
- Patented 2-stage electromagnetic shock sensor with built-in pre-intrusion alert to warn off thieves.
- Miniature alarm brain and RF transmitters.
- Quiet Chirp™ and Quiet Mode to avoid disturbing your neighbors when arming and disarming.
- Lifetime Limited Warranty.

FBI CAR ALARM

Alarm Accessories

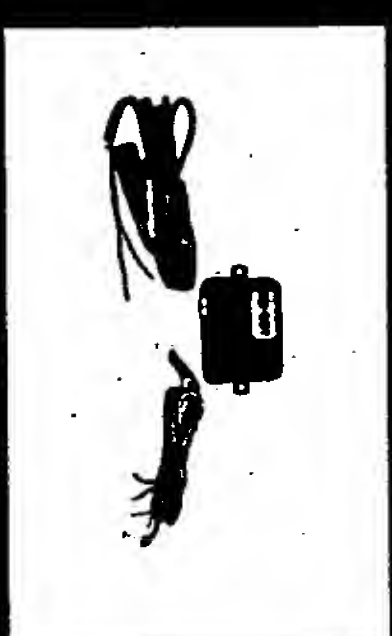

AU-94 Proximity Sensor & AU-94T Dual Zone Proximity Sensor
Our popular single zone and dual zone "Radar" style sensors are designed to detect an intruders presence and trigger your alarm before he actually touches your vehicle. Sensitivity range is fully adjustable on both sensors.

AU-84T Shock Sensor:
Our dual zone Magnetic-induction shock sensor with pre-warn output will detect sharp forceful blows a thief would use to break into your vehicle. A soft "bump" will cause the alarm to chirp warning the offender away. A hard hit will cause the siren to sound.

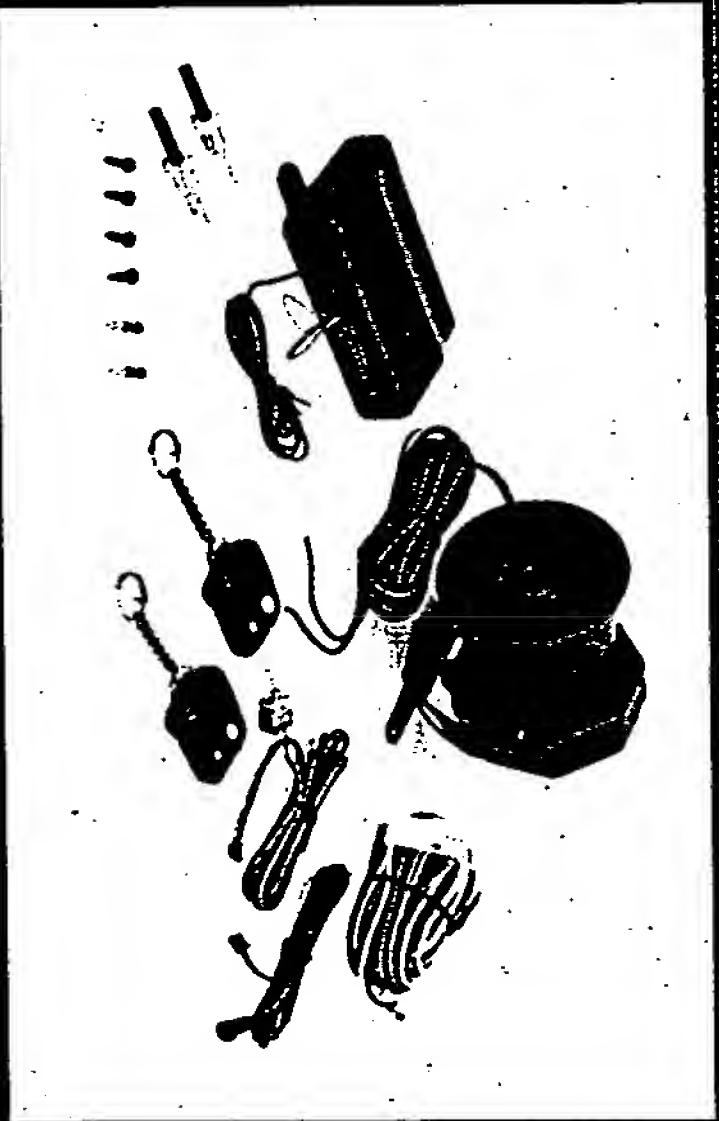

AU-95T Dual Zone Air Pressure Sensor
As the newest sensor to our line, the AU-95T has been specifically designed to detect the sharp air pressure changes created inside a vehicle whenever a door is opened or closed. Both zones are independently adjustable for maximum efficiency.

MODELS:

- FBI-410
- FBI-411
- FBI-515
- FBI-517

**AFFORDABLE PROTECTION
SOLID AS STEEL!**

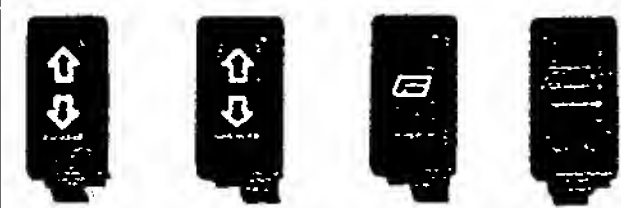

■ UNIVERSAL POWER-WINDOW Patented

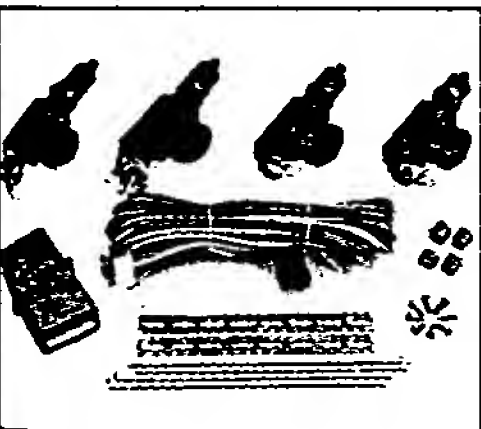

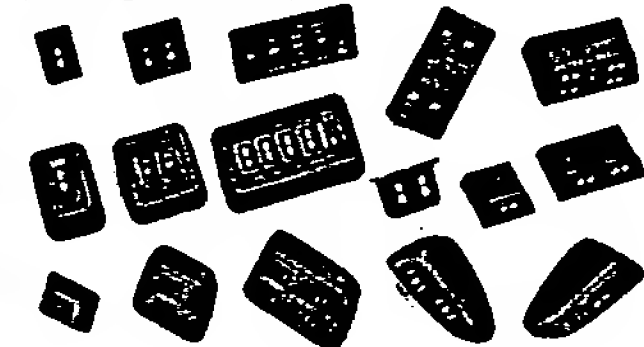

Model: 8000, 12V. DUAL WINDOW MOTOR KIT

- 2-WINDOW MOTOR KIT.
- FAST, QUIET AND SMOOTH WINDOW OPERATION.
- NEW POWERFUL MOTOR WITH THERMAL BREAKER.
- IMPROVED TRANSMISSION STRUCTURE, TRANSMISSION.
- CABLE EXTENSION ADAPTABLE.
- COMPLETE SPARE PARTS.
- A VARIETY OF SWITCHES & FRAMES AVAILABLE TO HELP COMPLEMENT VEHICLE INTERIOR.

SWITCH

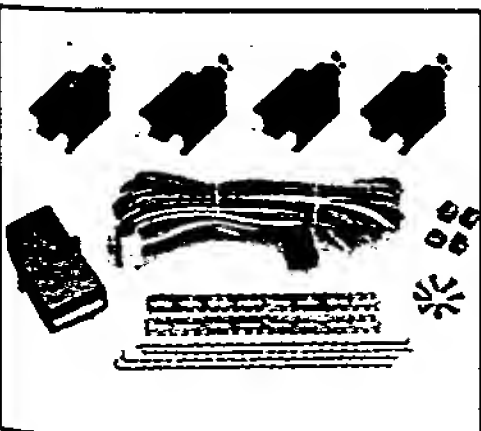

SWITCH FRAME

■ GUN SHAPE POWER-LOCK

**Model: 2200 (2-door) 2290 (Remote 2-door)
4200 (4-door) 4290 (Remote 4-door)
2202 (2-wire actuator)
2205 (5-wire actuator)**

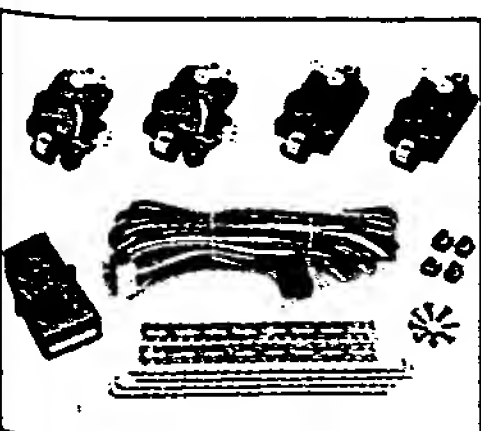

- TRAVEL DISTANCE: 3/4 INCH
- TORQUE: 6.6 LB.
- BOTH FRONT DOORS CONTROL
- COMPATIBLE WITH ALARM

■ O. E. TYPE POWER-LOCK

**Model: 2300 (2-door) 2390 (Remote 2-door)
4300 (4-door) 4390 (Remote 4-door)
2302 (2-wire actuator)
2305 (5-wire actuator)**

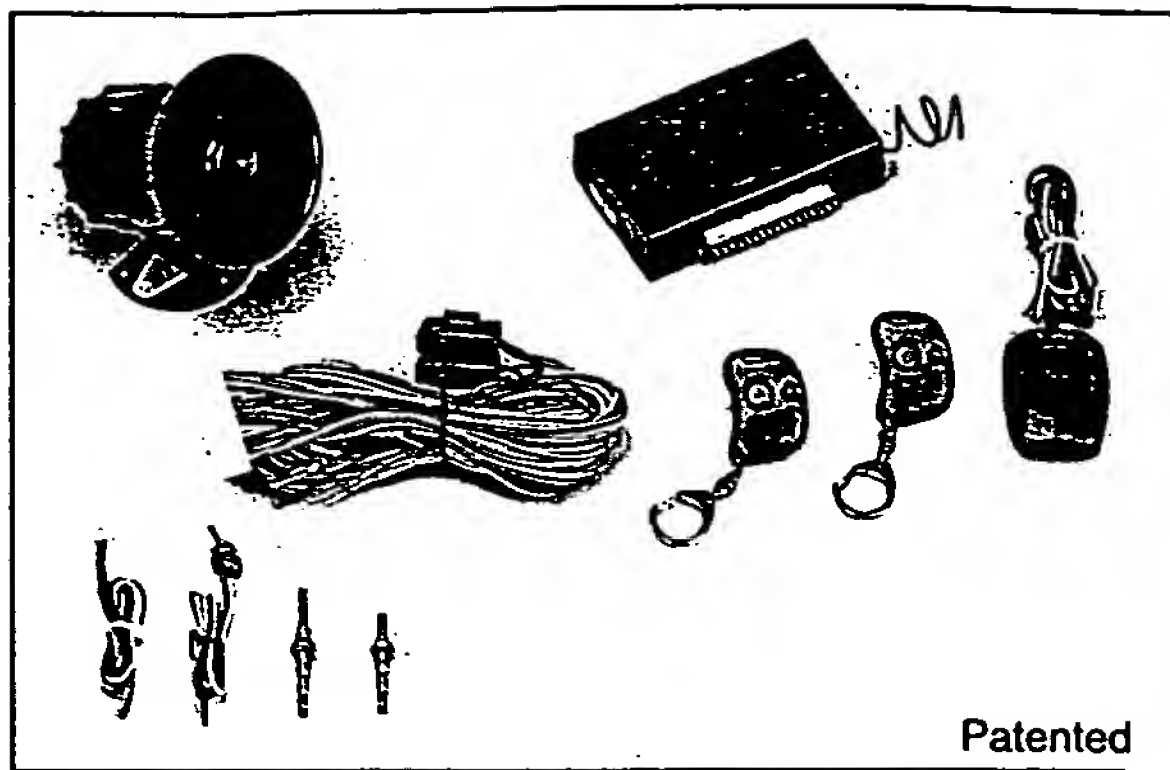

- TRAVEL DISTANCE: 3/4 INCH
- TORQUE: 5.95 LB.
- BOTH FRONT DOORS CONTROL
- COMPATIBLE WITH ALARM

■ H-TYPE POWER DOOR-LOCK

**Model: 2500 (2-door system)
2590 (Remote control 2-door)
4500 (4-door system)
4590 (Remote control 4-door)
2502 (2-wire actuator)
2505 (5-wire actuator)
2501 (Switch act. 2-door)
4501 (Switch act. 4-door)**

- TRAVEL DISTANCE: 11/16 INCH (18mm)
- PUSH/PULL FORCE: 11.0 LB (5 kgs)
- MANUAL OPERATION FORCE: 5 OZ (140 gs)
